

JF-18 KEYBOARD CHART - V1.0

By

Scooter14

This is my first effort at making a keychart for anything. This chart requires two sizes of paper- 1 sheet of legal, and 1 sheet of letter size.

This chart can also be used to "pencil in" custom keyboard layouts (although, there is a blank keyboard template available as well). It is easiest to use colored pens that match the colors of the modifiers (ie. shift, alt, ctrl, etc.). The second (numberpad section) page is offset to the right so the first can overlap to the edge of the numberpad section and the whole thing can then be laminated at Kinko's or where ever.

Use freely, and please mention my name if you decide to distribute or host. Let me know how I can make this better!!! I usually loiter around the SimHQ and Frugal's Jane's FA18 forums.

Scooter14 - September 11, 2003
